

MICROSOFT 365 SECURITY POSTURE ASSESSMENT

Understand and improve your security posture with Microsoft 365

How do you know if your Microsoft 365 environment is secure?

- ?
- Are you aware of the latest security innovations/capabilities in Microsoft 365?
- ?
- Have you configured all security workloads to NCSC and CIS best practice guidelines?
- ?
- Have you hardened your Azure AD and External Collaboration configurations?
- ?
- Have you hardened SharePoint Online (including ODB & Teams) sharing configurations?
- ?
- Are you aware of your current Secure Score rating?

If you are unsure of the above, we are here to help.

Microsoft 365 Security Posture Assessment

To protect your organisation against emerging threats, you have to keep improving and strengthening your security posture, however, before you can improve your security posture, you have to understand your current security posture.

Our Microsoft 365 Security Posture Assessment includes:

Analysis of current service/workload configurations against best and proven practices for Microsoft cloud security, covering:

- Azure AD, M365 platform, MCAS, MIP, SPO, EXO, M365 Defender
- Secure Score
- Compliance Score

Recommendations on how to improve the Microsoft 365 cloud security posture through the implementation of security controls available within the Microsoft 365 and Azure Active Directory suite of services.

What you will get:

- Detailed risk assessment based on National Cyber Security Centre (NCSC) and Centre for Internet Security (CIS) best practices and controls for securing M365
- Consolidated list of Compliance Centre improvement actions (Secure Score + Compliance Score)
- Prioritised list of key recommendations to action
